Magnesium air element

Galvanic element to produce power from magnesium and air. The packet includes the air element and two magnesium electrodes. This magnesium air battery is also known as a salt water fuel cell.

Caractéristiques techniques :

Open-circuit voltage: 1.2 V

Max. current: 0.36 A

Dimension: 6 cm x 8 cm x 2 cm

Sockets: 2 mm

Matériel livré :

Salt water fuel cell

Magnesium anode plate

Base plate

En option:

additionally required: salt and water
