Kit d'exper. de luxe

with Rhesus Factor. The kit contains artificial "blood" and artificial "test serum" which when combined results in precipitations which simulate concentration reactions. This is how the student learns how to infection. The blood consists of microscopocally small particles, which simulate red boods cells whose size and number can be determined.Contens:4 "blood samples"3 "serums" anti-A-B-Rh48 unbreakable and reusable test platesminiture mixing rod1 detailed instructor's guide
